SRIVISNU A

Software Engineer | Backend, Automation & Applied AI
Chennai, India | srivisnu824@gmail.com | +91 97908 83661
LinkedIn | GitHub | Portfolio

Professional Summary

Software engineer (B.E. Computer Science, 2026) who builds backend systems end to end: REST APIs, real-time event-driven services, transactional data stores, automation workflows, and CI-tested Docker deployments. Strong in Data Structures & Algorithms and Object-Oriented Design. Shipped three projects with measurable results, including a patent co-invented system, plus a Python developer internship.

Education

Sathyabama Institute of Science and Technology, Chennai **2022 – 2026**
B.E. Computer Science and Engineering (Data Science) *CGPA: 7.44/10.0*

Technical Skills

Languages: Python, Java, JavaScript, SQL, Unix Shell Scripting
CS Fundamentals: Data Structures & Algorithms, Object-Oriented Design, Debugging & Troubleshooting
Backend, APIs & Databases: REST API Design, FastAPI, Flask, Flask-SocketIO, Gunicorn, React, Real-Time/Event-Driven Systems, Concurrency; PostgreSQL, MySQL, SQLite, Relational Schema Design
DevOps & Testing: Git, GitHub, GitHub Actions, CI/CD, Docker, Linux, AWS, unittest, Automated Testing
AI & Automation: LLM API Integration, PyTorch, TensorFlow, YOLOv8, OpenCV, OCR, Scikit-learn, IBM watsonx & Watson APIs (exposure)

Experience

O Clock Software, Chennai **Sep 2025 – Oct 2025**
Python Developer Intern

- Developed reusable Python modules and automation workflows for data processing, validation, and downstream application operations, replacing repetitive manual steps with consistent, repeatable scripts.
- Investigated application issues with senior developers, diagnosing root causes and delivering maintainable Python fixes; practiced Git workflow, code reviews, and technical documentation.

Projects

FaceFare – Contactless Public Transport Payment System GitHub
Python, Flask, Flask-SocketIO, REST APIs, OpenCV, FaceNet, SQLite, Docker, GitHub Actions

- Designed and built a real-time contactless fare system from scratch (∼2,000 lines of Python, 110 commits) that **reduced simulated passenger boarding time by 33% (6s to 4s)** through automated face identification and fare processing.
- Architected a Flask backend with **12 routes, 5 Socket.IO handlers, and 8 passenger-management REST endpoints**; wallet updates use atomic SQLite transactions to prevent lost updates and negative balances under concurrent requests.
- Secured the service with authentication, CSRF protection, validated uploads, and face blurring; **GitHub Actions CI** runs unit tests on every push; containerized with Docker and Gunicorn.

SalesPilot AI – Sales Automation Platform GitHub | Live Demo
Python, FastAPI, React, SQL, REST APIs, LLM API integration, automated testing

- Built and deployed a full-stack platform (∼4,100 lines; FastAPI backend, React frontend with 8 pages) exposing **27 REST endpoints** over a **14-table relational schema**.
- Built a configurable **trigger-action automation engine** (follow-up tasks, lead routing, outreach drafts, score re-computation) with a full run-history audit log, plus **LLM-based email generation** through an OpenAI-compatible API with a deterministic fallback.
- Implemented **explainable 0–100 lead scoring** (11 signals) and deal win-probability prediction, covered by **12 automated backend tests**.

Vision-Based Safety & Fraud Detection During Vehicle Refueling GitHub
Python, YOLOv8, PyTorch, OpenCV, OCR, Flask

- Hackathon project (ACE-Hacks 2025, in collaboration with Renault's AI Lab): built a real-time pipeline chaining **4 YOLOv8 models** (fuel nozzle, vehicle, pose, fire/smoke) to flag safety lapses and fuel fraud.
- Trained the fuel-nozzle detector for 100 epochs, reaching **0.995 mAP@0.5**; built a Flask dashboard with a **5-state alert engine** and OCR-oriented meter extraction for live alerts.

Patents & Certifications

Patent (co-inventor): FaceFare: Vision-Based Public Transport Payment System Using Deep Learning and Facial Biometrics – Indian Patent App. No. 202641031039 A, published 03 Apr 2026.
Certifications: NSIC – AI Model Development using MLOps (Feb 2025) | AWS – Advantage Pro Certification
